

Input Output File

A prompt will open when the program runs. Users select an input file from the computer.

Step 1: After selecting the file, the user can select in which way he wants to create dynamic array. There are 3 strategies such as Incremental=1, Doubling=2 and Fibonacci=3. User can enter the value and according to his input dynamic array will be created.

Step 2: If user wants to sort the array, then user can enter the value = yes and saved the output into a file.

If the array is already sorted, then enter the value = no

Step 3: If you want to insert new value into dynamic array then enter a value that will be inserted into correct position and saved into a file.

Testcase 1: (Incremental)

Input file contains 50 words

Output:

```
PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS
